

Abstract

Title: Sports conditions for senior students in Mlada Boleslav

Objectives:

The objective of the thesis is to assess the current spatial conditions for sports in Mlada Boleslav for students at senior level, including the range of sports facilities available in the town. Results will be compared with students' opinions on spatial and material conditions for their locomotive activities in their schools. Their opinions will be gathered from a questionnaire.

Method:

Empiric quantitative research was carried out to gather the data, using a standardized questionnaire and a structured interview. The quantitative data was analyzed using the Microsoft Excel application.

Results:

Generally, sports conditions for senior students can be considered fair in Mlada Boleslav. Spatial conditions near the schools and economic background of the families, in particular, are showing very good results. The number of sports facilities and their condition are sufficient to the town area, especially favourable for organized sports. The conditions for free and unrestricted unorganized sports cannot be considered sufficient, due to lack of suitable sports facilities. This situation is being eased by sports facilities at the schools, which significantly contribute to students' satisfaction with sports conditions in the town.
